EPA REGION IX SITE SCREENING/PRIORITIZATION CHECKLIST

This review checklist is to be used by individual site screening staff when reviewing sites which have been brought to the attention of EPA or the State. Each site is reviewed on the merits of the discovery documentation and additional information gathered during the screening process. The guiding principal in evaluating a given site is to use common sense in assessing the information and subsequently presenting the site and its known hazardous potential to the SST. All sections of this form are to be completed for both screens and prioritizations.

1.0 GENERAL INSTRUCTIONS

Complete Section 1 for the site using readily available information and contacting appropriate individuals. A contact log (Attachment A) should be used to document information gained through correspondence, interviews, and telephone calls. Handwriting is acceptable if it is legible. Attach extra pages if necessary.

Comments: 13. City of Los Angeles Fire Department is the Certified Unified Program Agency (CUPA) for the site. On August 5, 1988, City of Los Angeles Fire Department issued a Notice of Violation for not submitting a Business Plan. However, County of Los Angeles Fire Department, HAZMAT Division is the Participating Agency (PA) to the City which does hazardous waste inspections at the site. On October 2, 2002, the California Regional Water Quality Control Board (RWQCB) conducted an Industrial Storm Water Inspection at the site. Due to improper storage and disposal of hazardous waste, the RWQCB, on November 22, 2002, referred the site to DTSC for further action. On January 22, 2003, County of Los Angeles (CUPA) issued a Notice of Violation not for obtaining an EPA ID number and for waste oil storage violations.

2.0 TECHNICAL INFORMATION

This section contains information about site's operational history and environmental sampling. Complete the following section by filling in the blanks or checking the appropriate boxes. If a question cannot be answered, explain why. If a drive-by is performed, complete Attachment B.

2.1 Operational History

1a. List present site owner(s) and operator(s). [Include dates of ownership]:
Mr. William O. Marx - Current Owner & Operator - For approximately 35 years
10975 Tuxford Street, Sun Valley, CA 91352
Telephone: (818) 768-0868
Eddie Salvatore - Manager

1b. Are hazardous substances presently on site? [x] Yes [ ] No
If yes, how and where are substances stored and used?

Soil is severely discolored with stains. Auto parts and iron pieces are scattered all over the site. Waste oil and antifreeze are stored in drums. Solid wastes such as household wastes and auto parts are stored in dumpsters, buckets, sacks, trash cans, and in piles.

2a. List historic site owner(s) and operator(s). [Include dates of ownership]:
Mr. William & Linda O. Marx - Owner and Operator for last 35 years
Prior to 4/26/2001 - PDQ Auto Parts and Salvage, Inc.
From 4/26/2001 - PDQ Auto Salvage

2b. Were hazardous substances present on site in the past? [x] Yes [ ] No
If yes, how and where were substances stored and used? Describe past operations briefly.
For approximately the last 35 years the site has been used for auto wrecking and salvage operations. Therefore, there is the possibility that hazardous wastes may have been generated or stored onsite.

Additional comments: The property is approximately two (2) acres in size. The Los Angeles County Assessor's Parcel Numbers are: 2408-033-033, 2408-033 036, 2408-033 039, 2408-044. On February 11, 2003, Los Angeles County HAZMAT Division issued a Notice of Violation (NOV) for improper handling of hazardous wastes such as waste oil and motor oil. County instructed the operator to stop improper storage and disposal of hazardous waste and obtain an EPA Identification number. On July 5, 1988, the City of Los Angeles Fire Department issued an NOV for not submitting a Business Plan.

2.2 Contaminant(s):

Additional Comments: No information is available that any sampling activities conducted at the site in the past. The site may have been contaminated with auto batteries, waste oil, metals, lubricants, antifreeze and other associated wastes.

2.3 Has a release as defined in CERCLA Section 101(22) occurred?

[ ] Yes [x] Suspected [ ] No

Identify the source(s) of the release or suspected release (e.g., drums, landfill, surface impoundment, waste pile, etc.): Drums, waste piles, above ground tanks, and cans.

2.4 Pathway(s) of contaminant migration:

[x] Air [x] Groundwater [ ] Surface Water [x] Soil

Briefly describe any identified pathway: Contaminated soil particles and dust may disperse through wind. Direct contact during soil disturbance may affect human health. Contaminant migration through soil may affect the quality of groundwater.

2.5 Sampling History

1. Has sampling been conducted? [ ] Yes [x] No

2. If environmental sampling has been conducted, use the Sampling Event Summary Table, Attachment C, to record the information.

2.6 Additional Information

Use this space to present additional information that may be used to support site screening decisions.

Although there was a County Hazardous Waste Generator Inspection recently, the site appears contaminated. County files indicated that the site was the potential for contamination.

3.0 REMOVAL ASSESSMENT CRITERIA — NCP EVALUATION

Use the following criteria to determine if the site should be referred to EPA's Removal Section. If the answer to any question is yes, get EPA concurrence for the decision. If all answers are no, go to Section 4. If a question cannot be answered, explain why in the Comments section below.

1.	Is there actual or potential exposure to nearby populations, animals, or the food chain from hazardous substances, pollutants, or contaminants?	[x] Yes	[ ] No
2.	Is there actual or potential contamination of drinking supplies or sensitive ecosystems?	[x] Yes	[ ] No
3.	Are hazardous substances, pollutants, or contaminants in drums, barrels, tanks, or other bulk storage containers which may pose a threat of release?	[ ] Yes	[x] No
4.	Are there high levels of hazardous substances, pollutants, or contaminants is soils largely at or near the surface, which may migrate and affect populations or the environment?	[x] Yes	[ ] No
5.	Could weather conditions cause hazardous substances, pollutants, or contaminants to migrate or be released?	[x] Yes	[ ] No
6.	Is there a threat of fire or explosion?	[ ] Yes	[x] No

5.0 SITE PRIORITIZATION WORKSHEET

Site Name: PDQ Auto Salvage
EPA ID Number: CAL000265325
Site Screen: X
Site Screener: Johnson P. Abraham
Date: March 28, 2003
Site Prioritization: _____

The following risk-based criteria should be used as a guideline to assist in the prioritization of pre-CERCLIS and CERCLIS sites. These guidelines can be used in various stages of assessment. When interpreting the information provided below, one should understand that conservative assumptions were made where information is lacking and the risk value is subjective.

Site screeners should complete this form by using the categories as guidelines. The "Notes" sections should be used to document assumptions made, data sources, or other information pertinent to determining risk prioritization. For benchmarks, use industrial/residential PRGs for soil, MCLs for groundwater, and NOAA standards for sediments.

5.1 HAZARDS IDENTIFICATION

Complete the sections below for the suspected contaminants of greatest concern. Use SCDMs as a reference for assigning hazardous substance risk category. Assign a Hazard Factor for each hazardous substance evaluated and then assign an Overall Hazard Factor Value combining the separate Hazard Factors. If only one hazardous substance is evaluated, the Overall Hazard Factor Value will be the same as the Hazard Factor for A. Create sections for "Hazardous Substance C" and "D" if necessary.
